PROFILE

Finance Data Analyst at Wates Group, delivering reporting across financial planning, contract costs and operational performance. Combines hands-on data preparation and Power BI modelling with clear stakeholder communication, analytical investigation and ownership from source data to the finished report. MEng Computer Science with Artificial Intelligence.

PROFESSIONAL EXPERIENCE

Finance Data Analyst | Wates Group / WPS

London, UK | Sep 2025 - Present

- **Financial planning:** Managed budgeting and forecasting reporting end to end with Financial Planning & Analysis (FP&A), from input collection and quality checks to Power BI, reducing preparation time and uncertainty around inputs.
- **Financial control:** Established working capital reports and ledger-level cost reporting supporting VAT reporting requirements, giving Finance teams clearer access to the information they need.
- **Commercial performance:** Built cost value reconciliation (CVR) and commercial reports covering labour, subcontractor and material spend by location, trade and operative. Translated Excel KPI logic into measures for large-contract performance reviews.
- **Data modelling:** Created Power BI semantic models from application data, Excel, SharePoint and SQL datasets; analysed MRI Maintain operational data to understand the activity behind performance measures.
- **Processing analysis:** Evaluated automated invoice processing software against baseline productivity to estimate staffing needs for additional volume and support the board investment case. Tracked improving accuracy, supplier patterns and workflow bottlenecks.
- **Cross-team delivery:** Translated Finance, Operations and Processing needs into technical requirements and KPI logic. Took ownership of delivery, communicating report logic and data-quality issues clearly to technical and non-technical colleagues.

SKILLS

Workplace: Power BI, SQL datasets, Excel, SharePoint, semantic modelling, data validation, KPI development, requirements gathering and cross-team communication.

Additional technical skills: DAX, Power Query, Python and data reconciliation. **Personal-project tools:** dbt, DuckDB, Databricks, Spark and GitHub Actions.

SELECTED PERSONAL PROJECTS

D2C Marketing Performance Analytics

Built 31 dbt models and 137 automated tests across four illustrative commerce sources for acquisition cost, return on ad spend and retention analysis. [Repository](#)

Supply Chain Performance Analysis

Developed a simulated solution covering demand, inventory, stockouts, shipment delays and supplier risk; translated forecasting and inventory outputs into business-facing KPIs.

EDUCATION

MEng Computer Science with Artificial Intelligence | University of Liverpool | 2025
