PROFILE

Commercial Finance Data Analyst with an MEng in Computer Science with Artificial Intelligence, delivering reporting across FP&A, working capital, contract costs and operational performance at Wates Group. Builds validated Power BI semantic models and reporting workflows from Excel, SharePoint, application and SQL data, translating commercial questions into clear KPI logic and decision-ready reporting.

PROFESSIONAL EXPERIENCE

Finance Data Analyst | Wates Group / WPS

London, UK | Aug 2025 - Present

- **FP&A reporting:** Managed budgeting and forecasting reporting end to end with Financial Planning & Analysis, from collecting submissions and preparing inputs through validation and Power BI delivery, reducing preparation effort and uncertainty around inputs.
- **Financial control:** Established working capital reports and ledger-level cost reporting to support VAT requirements, giving Finance teams clearer access to consistent cost detail.
- **Commercial analytics:** Built cost value reconciliation (CVR) and commercial reports covering labour, subcontractor and material spend by location, trade and operative. Translated Excel KPI logic into DAX measures for large-contract performance reviews.
- **BI modelling & controls:** Created Power BI semantic models from application data, Excel, SharePoint and SQL datasets, applying reconciliation and data-quality checks before figures reached reporting outputs.
- **Operational business case:** Evaluated automated invoice processing against baseline productivity to estimate the staffing capacity required for additional volume and support a board-level investment case. Tracked accuracy, supplier patterns and workflow bottlenecks.
- **Cross-functional delivery:** Translated Finance, Operations and Processing questions into technical requirements, KPI logic and usable reports; communicated definitions and data-quality issues clearly across teams.

SKILLS

BI & data modelling: Power BI, DAX, Power Query, SQL datasets, Excel, SharePoint, semantic modelling, data validation and reconciliation.

Commercial finance: FP&A reporting, working capital, CVR, ledger-level cost analysis, contract KPIs and operational business cases. **Project tools:** Python, dbt, DuckDB, Databricks, Spark and GitHub Actions.

SELECTED PERSONAL PROJECTS

D2C Marketing Performance Analytics

Built 31 dbt models and 137 automated tests across four illustrative commerce sources for acquisition cost, return on ad spend and retention analysis. [Repository](#)

Supply Chain Performance Analysis

Developed a simulated solution covering demand, inventory, stockouts, shipment delays and supplier risk; translated forecasting and inventory outputs into business-facing KPIs.

EDUCATION

MEng Computer Science with Artificial Intelligence | University of Liverpool | 2025
