Amani Mulira

Commercial Data Analyst | SQL · Power BI · Python

London, UK | amanimulira@gmail.com | +44 (0) 7731814161 | linkedin.com/in/amanimulira

PROFESSIONAL PROFILE

Commercial Data Analyst who turns financial and operational data into clear recommendations on margin, cost and productivity. Most recently at Wates Group, owned SQL and Power BI analytics across 22 contracts and £50m+ in annual cost activity, identifying margin pressure and informing investment and process improvements. MEng Computer Science (AI) graduate with strong SQL, Python, DAX and dbt skills, experienced in partnering with Finance, Commercial and Operations teams.

PROFESSIONAL EXPERIENCE

Finance Data Analyst | Wates Group — London | Aug 2025 – Oct 2026

- Identified margin pressure across 100+ Schedule of Rates codes by comparing costs and revenue by contract and trade, prompting commercial reviews of underperforming workstreams and supporting rate renegotiation priorities.
- Owned SQL and Power BI reporting for 22 contracts covering £50m+ in annual cost activity, increasing the proportion of workstreams covered by standardised reporting by 15%.
- Analysed 100,000+ invoice records to compare automated and manual processing across throughput, accuracy and intervention rates, informing targeted changes to supplier validation rules and exception handling.
- Analysed timesheet and job data to identify productive and unproductive time, workforce allocation and jobs completed per day, highlighting opportunities to improve utilisation.
- Achieved 98% data accuracy and reduced reporting discrepancies by 20% through SQL reconciliation and consistent reporting definitions agreed with Finance and Operations.
- Built Power BI semantic models containing 5m+ records and defined 30+ KPIs across profitability, productivity, costs and forecast variance, enabling consistent comparison across contracts.
- Reduced manual review time by 25% through streamlined validation and presented findings to commercial and operational stakeholders to support performance reviews and variance investigation.

Data Analyst Intern | National Information Technology Authority-Uganda — Kampala | Apr 2024 – Sep 2024

- Used SQL to extract and validate data for monthly reporting on government digital initiatives, reducing manual data preparation time by 20%.
- Supported the development and maintenance of dashboards tracking operational and programme performance, helping stakeholders monitor progress and investigate exceptions.
- Improved reporting consistency by cleaning and reconciling data and documenting repeatable reporting processes.

Data Analyst Intern | DotSavvy Africa — Nairobi, Kenya | Jun 2023 – Aug 2023

- Analysed user behaviour using Google Analytics and Python, identifying UX improvements associated with a 25% increase in session duration and page views.
- Built interactive Streamlit dashboards and prototypes from cleaned web analytics data, helping stakeholders explore engagement trends and prioritise product improvements.
- Produced regular performance summaries translating web analytics findings into practical recommendations.

SKILLS

Commercial Analysis: Profitability and margin analysis, cost analysis, variance investigation, forecast variance, KPI development, workforce productivity, investment and process-improvement analysis

Technical: SQL, Power BI, DAX, Power Query, Python, dbt, Excel, Google Analytics, Streamlit

Data Modelling & Quality: Semantic and dimensional modelling, data transformation, validation and reconciliation, row-level and object-level security, SharePoint

Stakeholder Communication: Translating analysis into recommendations, partnering with Finance, Commercial and Operations, presenting findings and supporting performance reviews

EDUCATION

MEng Computer Science (Artificial Intelligence) — 2025

University of Liverpool — Upper Second-Class Honours (2:1)

Dissertation: Developed and evaluated a Python machine-learning pipeline to predict customer churn, comparing classification models and translating model outputs into recommendations for targeted retention activity.
